

There are no surprises with the DEMA DATA GRIP™ Hand-Held Laundry Machine and Chemical Usage Data Collection and Reporting system.

This new DEMA DATA GRIP™ system is right in the palm of your hand, with extensive memory, ideal as a long-term monitoring system on laundry machines and chemical usage 24 hours-a-day. The DATA GRIP memory can monitor and report on over 78,000 data points: 180 days, 24 hours-per-day, 3 formulas per hour and 6 pumps per formula. It's totally "password protected" and can be used as a portable stand-alone system for periodic monitoring, audits and trouble-shooting. Concise, printable customized reporting includes invoice reports itemized per formula and/or account type, easily downloaded via USB port with memory device and managed from desktop or PC.

The new DATA GRIP easily interfaces with the DEMA ATLAS™ On-Premise Laundry Dispenser, now with the new molded polypropylene flush manifold 951, when chemical product is delivered with water. This unique design offers the flexibility of up to seven chemicals. When the number of chemical products changes, modification can easily be done on-site. Screw-in check valves have either hose burb or push-to-connect fittings for quick, easy installation. Also a new large quick-change pump with output of up to 50 ounces-per-minute is optional when the standard 16 ounce-per-minute isn't sufficient. Squeeze tubing is quick-change, without any tools. Here's a dependable, low-cost flush option for today's demanding on-premise laundry applications.
