

Ready, Aim, Fire... RAPID FIRE™ That Is

The new DEMA RAPID FIRE™ spray and foam dispenser provides total, full water flow when the valve opens. There's one convenient control kind for both water flow and chemical selection, so there's no mixing of chemicals. Accurate, proper dilution is assured... confusion is eliminated.

This RAPID FIRE™ dispenser is ideal for cleaning and sanitizing supermarket meat rooms, seafood and meat departments, kitchen and food preparation areas, food processing and packaging plants and school and health club locker rooms and showers.

The removable injector is easily maintained and all internal components are of long-lasting, chemical-resistant polypropylene construction. There's a built-in foam wand hanger preventing wand loss or damage. The optional hose hanger features a unique hose "strain-relief" design.

A full range of hoses, foam wands, spray guns, nozzles and hose hangers are available, answering any application's particular needs.
