

## DEMA® Redefines the Closed Loop System

The new DEMA® Safe Link™ Closed Loop Chemical management system features a superior spill-proof, two-compartment design, incorporating the proven DEMA® Dura-Seal® technology. It virtually eliminates worker exposure to chemicals with sealed, spill-proof bottles and connections. Accurate dilutions are assured, time-after-time.

The unique insert design makes chemical packaging easy and safe, as its superior sealing capabilities allow for a greater variance in bottle finish and inside diameter. The chemical pick-up tubing fits any-and-all applications. All of this results in less inspection, less rejection, less failure and more importantly, less operational costs.

In addition, the DEMA® Safe Link™ Closed Loop System is forward and reverse compatible with systems already in use. An optional “lock and key system” is available for proprietary offerings or individual chemicals. National and International standards are met, including GS-37, by this truly “green” system.

Over-usage is reduced, and more profitable sales are generated then when using open containers or inferior inserts.
