

"GREEN" Closed Loop System

The new DEMA GREEN 2-component Closed Loop System is designed with dispensing equipment in mind, eliminating access and exposure to chemical concentrate, providing worker safety, controlling use and reducing cost. National and International Environmental standards are met, including GS-37. System is spill proof and tamper-resistant and allows for easy bottle insertion with no "up-charge" for premium insert. This system is forward and reverse compatible with systems already in use, without revisited, retro fitted or reworked procedures.
